

Capacity Management and Planning

Our capacity management and planning experts can identify ways for you to transform your data center, reduce costs and increase the value of IT – from the data center to the desktop. Every solution yields greater efficiency, control, and flexibility to deliver services and applications.

WHAT WE DO

Assess: We document your business requirements and project goals, and then gather data on your enterprise infrastructure and applications.

Design: In a clear, comprehensive assessment report, we compare solutions across multiple vendors and recommend those that will optimize your existing capacity. Our recommendations are presented with both total cost of ownership (TCO) and return on investment (ROI) analyses.

Implement: Our team can implement any or all of our capacity recommendations, or support your IT group during in-house deployment.

BENEFITS OF WORKING WITH REDAPT

Unprecedented transparency that can transform IT

Ongoing reduction in IT operating costs

Higher value for your existing investment in hardware, software, and facilities

Proactive capacity increases to avoid outages, downtime, and other repercussions of insufficient capacity

Ability to document the financial benefits of consolidation, virtualization, and optimization using financial models

“Introducing the right technologies and utilizing their capacity management tool, Redapt helped us streamline our Virtualization strategy and reduce licenses, easing the pain and getting our data center under control.”
