

# Network Design and Implementation

Our network design and implementation team are experts at building high-performance network infrastructures that meet our clients' complex business requirements.

## WHAT WE DO

**Assess:** We assess your network architecture and document your business requirements to thoroughly understand your data and application. Our assessments cover every area of a successful network infrastructure – from security and performance to application and data delivery throughout the organization, including mobile and wireless users, branch offices, and redundant data centers.

**Design:** We design and configure technology solutions that meet your requirements for security, data and application delivery, data backup, and other network needs.

**Implement:** Our network engineers can implement any or all of your network design, or support your IT group during in-house deployment.

## BENEFITS OF WORKING WITH REDAPT

- Independent assessments of the best technologies available to meet your business criteria
- Expert staff who can supplement your IT group to fill any gaps in your network technology expertise
- Experience in complex multi-site enterprise data centers, as well as design and optimization of hyper-scale architectures

*"Our engineers have extensive experience in getting peak network performance in complex data center environments."*

#### FEATURED EXPERTISE AREAS

CLOUD-READY DATA CENTER  
HIGH PERFORMANCE NETWORK INFRASTRUCTURE  
SECURITY AND COMPLIANCE  
BUSINESS CONTINUITY  
APPLICATION INFRASTRUCTURE  
MOBILITY  
REMOTE USERS

#### TECHNOLOGY RESOURCES

JUNIPER  
FORCE10  
BROCADE  
F5  
EXTREME  
MERU NETWORKS

## ENGAGE OUR NETWORK ENGINEERS

Contact your Redapt Technology Solution Specialist to engage with our network engineers on your most critical network projects. A solution to your network initiative is a call away.
