

Storage Capacity Management

Because efficient data management fuels business success, we design storage architecture that easily adapts to capacity demands and new technologies. Our storage experts can help you understand your data landscape and recommend solutions for managing the environment.

WHAT WE DO

Data consolidation: We assess your current data landscape, and then develop a plan for bringing data growth and utilization under control.

Data compliance: We help you comply with the rules and regulations for your industry that apply to your critical data.

Business continuity: We ensure your data is secure in the event of failure using industry best practices for data center failover, data backup and recovery, replication, and high availability

BENEFITS OF WORKING WITH REDAPT

Optimal use of your existing storage capacity to lower your total cost of ownership and avoid additional investments

Unexpected performance improvements from our many years of data and storage experience

The comfort of knowing that your business can operate efficiently without interruption to the flow of data

"Redapt allowed our group to understand how our storage assets were being utilized. Their solution enabled our group to increase utilization and lower our overall data costs."

FEATURED EXPERTISE AREAS
